The practical bee guide. A manual of modern beekeeping

Digges Joseph Robert
Title: The practical bee guide. A manual of modern beekeeping

Author: Digges Joseph Robert

This is an exact replica of a book. The book reprint was manually improved by a team of professionals, as opposed to automatic/OCR processes used by some companies. However, the book may still have imperfections such as missing pages, poor pictures, errant marks, etc. that were a part of the original text. We appreciate your understanding of the imperfections which can not be improved, and hope you will enjoy reading this book.

THE PRESS.

"A manual which will most assuredly be of great value."—Pall Mall Gazette.

"Practical to the core, really fascinating reading, in each part the evidence of a master hand is apparent."—Gardener.

"Newspapers of all shades are loud in its praise, which is well deserved, as the work has been well done. It bids fair to become the standard work on bees in Ireland."—Aberdeen Journal.

"This is one of the many really good things that come to us from the Emerald Isle, and is, we believe, the best practical guide to beekeeping that has been published either in England or Ireland."—Hereford Times.

"Essentially practical, lucid in style, often eloquent in diction, as a popular work on a fascinating branch of natural history, it will hold the attention of any intelligent reader."—Wellington Evening Post, New Zealand.

"The structure of the bees, both external and internal, is described accurately, and in sufficient detail, while the story of their lives and labours is told vividly and poetically. We heartily congratulate the author."—Irish Naturalist.

"The most practical and comprehensive book on bees that has been offered of late years. There is nothing in this Manual that would fail to instruct, interest, and charm all lovers of bees, and incidentally all lovers of nature."—Weekly Freeman.

"Probably the best practical guide to the subject that has been published. Nothing of the kind which has been published of late approaches the book in thoroughness. It is full of detail, and yet it is so well arranged that the beginner as well as the expert will read it with profit."—Saturday Review.

"From the first to the last page it is packed with such information as the api culturist particularly needs. One can read, learn, and enjoy. Mr. Diggs has the faculty of marshalling his facts in the clearest possible way. Every point of importance in the subject is expounded."—Agricultural Economist.

"The style is simple, vigorous, and crisp, yet withal occasionally soaring up into dazzling flights of beautiful and touching eloquence. Some of the paragraphs remind one of the stately and majestic march of Maeterlinck's harmonious, but oftentimes involved sentences. Occasionally we get a flash of Celtic wit—we never meet either a dull or uninterssting paragraph."—Kerry Sentinel.

"A thoroughly trustworthy, complete, and up-to-date manual of the art of modern beekeeping. The arrangement and get up of the volume deserve a special word of commendation. In order to facilitate reference, beside the caption every paragraph is numbered, so that the special point upon which information is sought can be turned up without trouble. What will certainly attract the non-beekeeper is the character of the illustrations."—Irish Times.

"This manual will be found a perfect encyclopaedia of knowledge in regard to the bee. The author, already well known as the editor of The Irish Bee Journal, is to be congratulated on his handling of the vast amount of matter at his disposal. He has contrived to preserve intact all the fascination of his subject, and, while supplying the most minute and detailed information, to compile a book to be read with interest from other than a beekeeping standpoint."—Literary World.

"Since Cheshire, twenty years ago, brought out his two expensive volumes, 'Bees and Beekeeping,' nothing has appeared in these countries dealing with the modern management of bees upon the same comprehensive scale, as does this guide. The author's recognised ability as an expert in beekeeping, his delightful treatment of the subject, and the very high-class printing and binding of the volume have combined to produce a work which has out-distanced all its competitors, and is the most comprehensive book of its kind ever published in this country."—Freeman's Journal.
THE CRAFT.

Experts and Prominent Beekeepers.

"I am delighted with it."—T. Lewis, Kirkbush, Wales.
"I could not get on without it."—Thomas Watten, Dugort, Achill.
"I may simply not live without it."—J. Hoggin, Co. Longford.
"It is perfect, and an immense advance."—J. C. Batty, Hereford.
"A treasure of information."—S. N. Longo, Bristol.
"Certainly the best book on bees that I have read."—R. McKenzie, Fife.
"A book of great value."—A. Scholl, Apiarist, Office of State Entomology, Texas.

"Your handsome book does you great credit."—The Provost of Trinity College, Vice-President, Irish Beekeepers’ Association.
"I have read it at meals, read it at night, and read it at dawn, and have become an enthusiast."—Miss A. S. Hants.
"Since I have had your book, I find I can do everything myself with my bees, which is a great saving."—Miss B. Devon.
"I would not wish a week to pass without a copy in the house."—Rev. A. Harris, Co. Wexford.

"I attribute my success chiefly to it."—P. F. O’Brien, County Instructor in Beekeeping, Wexford.

"Much more interesting, instructive, and easily read than any similar book on bees."—R. A. Johnston, Burton-on-Trent.
"Follow the good advice there given and you will . . . possibly save the price of the book in one small consignment."—D. M. McDonald, Banff.
"It wants only to be known in this country to have the rest of the guides discarded."—Rev. P. Askenzie, Hull, Yorkshire.
"A bright attractive book, fully up-to-date."—A. I. Root ("Gleanings"), Ohio, U.S.A.

"We find it invaluable in our difficulties."—Sister B. M., Harrow on the Hill.

"I know no book can be got to equal it."—Mrs. Dames-Longworth, Glynewood, Athlone.

"The best and most up-to-date work on apiculture that I have come across."—A. D. Shaw, Wolverhampton.

"My constant book of reference, I find that it never fails me."—Rev. W. Young, Cheshire.

"When people ask me which is the best practical bee book, I tell them, of course, that it is your Guide."—Very Rev. F. M. Missey, Buckfast Abbey, Devon.

"It has reached my ideal. I have gone through a great number of books on apiculture, but not one is comparable to it."—Rev. J. Meehan C.C., Drumkeerin.

"Full of instruction; charmingly written; in my opinion the best book of reference for beekeepers in the English language."—Lieut.-General Pottinger, R.A.

"I consider it the finest book on the subject in the English language. I speak of what I know, as I believe I have, or had, almost every book on the subject worth having."—C. N. White, St. Neots.

"It is, in my opinion, an advantage that the whole subject is in one book—so many authors divide the subject, giving natural history in one volume, and practical beekeeping in another. I can find nothing but praise for it."—T. B. O’Brien, Expert, Irish Beekeepers’ Association, Author of "Instruction in Beekeeping.

"The writer, being a man of culture, and an enthusiast in all pertaining to beekeeping, has produced a book which combines the poetry of Maeterlinck, with the utility of the Irish Bee Journal, of which he has been editor since its inception."—M. H. Red, Expert and Examiner, Hon Sec. Irish Beekeepers’ Association.
