Diagnosis and treatment of ear diseases

Buck Albert H
DIAGNOSIS
AND
TREATMENT
OF
EAR DISEASES

BY
ALBERT H. BUCK, M.D.
NEW YORK CITY
Aural Surgeon to the New York Eye and Ear Infirmary; Instructor in Otology in the College of Physicians and Surgeons in the City of New York

NEW YORK
WILLIAM WOOD & COMPANY
27 GREAT JONES STREET
1880
PREFACE.

In the following treatise my aim has been to present, in text-book form, a picture of diseases of the ear as they have appeared to me in private and hospital practice. I have occasionally, it is true, drawn my illustrations from the published experience of others, but in the main I have followed closely the plan of using only the material stored up in my own case-books, and of describing only those methods of treatment which I have tested and found both safe and efficient.

A. H. B.
CONTENTS.

CHAPTER I.

SKETCH OF THE PHYSIOLOGY OF THE ORGAN OF HEARING...................... 1

CHAPTER II.

EXAMINATION OF THE PATIENT........................................... 17
Tests of the hearing-power............................................. 17
Instruments and methods of examination.............................. 20
   Ear-specula......................................................... 20
   Reflectors......................................................... 22
   Introduction of the speculum and use of the reflector........... 24
   Accessory instruments used in the examination of the ear...... 28

CHAPTER III.

DISEASES OF THE AURICLE.................................................. 35
Eczema................................................................. 35
Inflammation of the auricle........................................... 39
Hematoma auris.......................................................... 40
New-growths............................................................. 51
Miscellaneous diseases................................................ 53
Congenital malformations............................................. 55

CHAPTER IV.

DISEASES OF THE EXTERNAL AUDITORY CANAL.............................. 57
Impacted cerumen....................................................... 57
Acute circumscribed inflammation.................................... 65
Acute and chronic diffuse inflammation.............................. 74
Desquamative inflammation............................................ 86
Ulcers, polypoid growths, and caries................................ 92
   False membranes in the auditory canal............................ 98
CONTENTS.

Syphilitic ulcers and condylomata ........................................ 104
Foreign bodies ................................................................. 109
Wounds .............................................................................. 113
New-growths.......................................................................... 114
Hyperostosis; exostoses; bony closure ..................................... 114
Cancer ................................................................................. 118
Sarcoma .............................................................................. 120
Cysts ................................................................................. 123

CHAPTER V.

METHODS OF EXAMINING THE MIDDLE EAR ................................ 125

CHAPTER VI.

DISEASES OF THE MIDDLE EAR (NON-PURULENT FORMS) .......... 141
Preliminary remarks .............................................................. 141
Affections of the Eustachian tube ............................................ 142
Acute and subacute inflammation of the middle ear ............... 151
Catarrhal inflammation of the middle ear .................................. 153
Chronic subacute catarrh......................................................... 193

CHAPTER VII.

DISEASES OF THE MIDDLE EAR (PURULENT FORMS) ............... 196
Acute purulent inflammation .................................................. 196
Acute inflammation of the posterior fold .................................. 224
Syphilitic disease .................................................................. 227
Chronic purulent inflammation................................................. 230
Simple uncomplicated cases .................................................... 237
Proliferative cases ................................................................ 246
(Foreign bodies in the middle ear) ............................................ 258
Cases in which the bone is involved ........................................ 259

CHAPTER VIII.

FRAC TURES OF THE TEMPORAL BONE .................................... 278

CHAPTER IX.

DISEASES OF THE MASTOID PROCESS ..................................... 296
I. Affections in which the antrum is the part chiefly involved ........ 301
II. Acute inflammation of both the antrum and the pneumatic spaces .... 328
III. Inflammation of the external periosteum of the mastoid process .... 355
CONTENTS.

CHAPTER X.

Miscellaneous Conditions of the Drum-membrane, Ossicles, and Tympanic Cavity ................................................................. 370
Atrophy of the membrana tympani .................................................. 370
Horny growth of the membrana tympani ......................................... 371
Vascular growth of the membrana tympani ...................................... 372
Deformed drum-membrane .............................................................. 372
Absence of the hammer ................................................................. 372
Hook-shaped manubrium mallei ...................................................... 373
Ruptures of the drum-membrane .................................................... 373
New-growths of the middle ear ........................................................ 374

Hyperostosis .................................................................................. 374
Vascular growths .......................................................................... 375

Malignant tumor ............................................................................ 382
Subjective and objective systolic murmurs ..................................... 386
Otalgia ............................................................................................ 387

CHAPTER XI.

Different Forms of Aural Disease in which the Labyrinth is Believed to be Involved ................................................................. 388

INDEX ............................................................................................ 405
