Chorlton's grape growers' guide. A handbook of the cultivation of the exotic grape

Chorlton William
CHORLTON'S
GRAPE GROWERS' GUIDE.
A HANDBOOK
OF THE
CULTIVATION OF THE EXOTIC GRAPE.

BY
WILLIAM CHORLTON.

NEW EDITION,
WITH DESCRIPTIONS OF THE LATER EXOTIC GRAPES, AND A
SELECT LIST OF THE NATIVE VARIETIES.

BY DR. GEORGE THURBER.

ILLUSTRATED.

NEW YORK:
ORANGE JUDD COMPANY
1902
Entered, according to Act of Congress, in the year 1887, by the
O. JUDD CO.,
In the Office of the Librarian of Congress, at Washington.
## CONTENTS

### CHAPTER I.
**INTRODUCTORY REMARKS.**

<table>
<thead>
<tr>
<th>Topic</th>

CONTENTS

Difficulties with outside temperature ........................................... 30
Description and plan of house .................................................. 31
Plan of ventilator ........................................................................... 32
Advantage of inside planting ......................................................... 33
Plan of house heated by flue .......................................................... 34
Grapery for pot culture:
  Plan of house for ........................................................................ 35
  Other houses suitable ................................................................... 36
Retarding House:
  Objects of .................................................................................. 36
  Position and aspect ...................................................................... 37
  Plan of double detached house ...................................................... 38
  Mr. Webster's method of ventilation ............................................. 39

CHAPTER III.

ARTIFICIAL HEAT AND APPARATUS.

Reasons why it is required .............................................................. 40
Steam not suitable, and why ............................................................ 41
Hot water the best ........................................................................... 41
Difference of material for pipes, &c................................................. 42
Plan of boiler .................................................................................... 43
Brick flues, general remarks on ....................................................... 44
Drying and parching effects of flues ................................................. 45
Size and capacity of flue and furnace ............................................. 46
Polmaise heating, remarks on ........................................................... 47
Plan of flue and polmaise combined ................................................ 48

CHAPTER IV.

BORDERS, OR PREPARED BEDS.

Importance of right preparation ...................................................... 49
Bad effects of unsuitable materials .................................................. 49
Nitrogenized manure not permanent ................................................. 50
Good properties of bones and lime .................................................. 52
Evil of over-deep borders ................................................................ 52
The strongest growth not the best ................................................... 52
Advantages of well-drained borders ............................................... 53
How to make the borders ................................................................. 53
Good drainage retains the moisture ................................................ 54
Advantages of making only a part at first ......................................... 55
Too much stimulating matter not good ............................................ 56
CONTENTS.

<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td>Width of borders</td>
<td>56</td>
</tr>
<tr>
<td>How to retain natural longevity</td>
<td>57</td>
</tr>
<tr>
<td>Useless expenditure</td>
<td>58</td>
</tr>
</tbody>
</table>

CHAPTER V.

PLANTING AND MANAGEMENT THE FIRST YEAR.

Choosing of vines for planting            | 59   |
When to plant                              | 59   |
How to plant                               | 60   |
Careful watering required                   | 61   |
Planting vines previously started into growth | 61   |
Management through the summer              | 62   |
Attention to the roots                      | 62   |
Necessity of a warm temperature            | 63   |
Attention to the tops                       | 64   |
Increase of air as ripening progresses      | 64   |
How to prune, &c.                          | 64   |
Wash to kill insects                        | 65   |
Covering for winter                         | 65   |
Top-dressing of compost                     | 66   |

CHAPTER VI.

MANAGEMENT FOR THE SECOND YEAR, AND PERMANENT TREATMENT FOR THE COLD GRAPERY.

Retarding of the buds                      | 67   |
How to manage the advancing growth         | 67   |
Reducing of bunches                         | 68   |
Regulation of temperature                   | 68   |
Fertilizing the flowers                     | 69   |
Application of water after blossoming      | 69   |
Further reduction of fruit                  | 70   |
Thinning out the superfluous berries        | 71   |
Inside watering through the summer          | 72   |
Outside watering through the summer         | 72   |
Application of liquid manure                | 73   |
A drier atmosphere and more air required later in the season | 73   |
House to be closed on frosty nights         | 74   |
Fall management                             | 74   |
Weight of fruit to be allowed               | 75   |
## CONTENTS

### CHAPTER VII
**THE EARLY GRAPERY, OR FORCING HOUSE**

<table>
<thead>
<tr>
<th>Practical skill required, and remarks</th>
<th>77</th>
</tr>

</table>

### CHAPTER VIII.
**POT CULTURE**

<table>
<thead>
<tr>
<th>Advantages, care required, &amp;c.</th>
<th>91</th>
</tr>
</thead>
<tbody>
<tr>
<td>Comparative difference in crop</td>
<td>92</td>
</tr>
<tr>
<td>How to economise space</td>
<td>93</td>
</tr>
<tr>
<td>Suitable vines, compost, and potting</td>
<td>93</td>
</tr>
<tr>
<td>General treatment</td>
<td>95</td>
</tr>
<tr>
<td>Management for second fruiting</td>
<td>96</td>
</tr>
<tr>
<td>Application of liquid manure</td>
<td>97</td>
</tr>
</tbody>
</table>

### CHAPTER IX.
**RETARDING HOUSE**

<table>
<thead>
<tr>
<th>Objects of the Retarding House</th>
<th>98</th>
</tr>
</thead>
<tbody>
<tr>
<td>General remarks, and treatment</td>
<td>98</td>
</tr>
<tr>
<td>Caution required in pruning</td>
<td>101</td>
</tr>
<tr>
<td>How long in the year grapes may be had</td>
<td>102</td>
</tr>
</tbody>
</table>

### CHAPTER X.
**LIST OF VARIETIES**

<table>
<thead>
<tr>
<th>Remarks on the confusion of kinds</th>
<th>104</th>
</tr>
</thead>
<tbody>
<tr>
<td>Exotics, descriptive list</td>
<td>105</td>
</tr>
<tr>
<td>Cold Grapery, the best kinds for</td>
<td>112</td>
</tr>
<tr>

CONTENTS.

Pot culture .............................................. 113
Remarks on Muscats ................................. 114
Native Grapes, varieties of ....................... 115

CHAPTER XI.
PRUNING AND TRAINING.

General remarks ..................................... 116
Double spur method .................................. 117
Single close spur method ............................ 119
Long rod .................................................. 120
Renewal ................................................... 121
Extension ................................................ 122
To produce temporary full crop .................... 124
Longevity of the grape vine ....................... 125
Weight of fruit that a vine will produce ........ 125
Advantages of extension .............................. 126
Summer pruning ....................................... 126
Evils of shortening in too close .................... 128
Curtailing the plant’s energy shortens life ......... 129

CHAPTER XII.
PROPAGATION AND THE RAISING OF NEW KINDES.

Propagation by eyes .................................. 131
Cuttings .............................................. 132
Coiling ............................................... 133
Layers ................................................ 134
Layers suspended ..................................... 134
Grafting .............................................. 135
Inarching ............................................ 137
Seed .................................................... 138
The raising of new kinds ......................... 138
Improvement that may be made ................. 139
National profits ..................................... 140
Hybridizing, or cross-breeding .................... 141

CHAPTER XIII.
DISEASES.

Mildew:
Different kinds, and first indication ............. 143
Oidium, its appearance ............................. 143
CONTENTS.

**Time of appearance** 144
**Sulphur a remedy** 145
**Botrytis described** 145
**How fungoids vegetate** 146
**Kinds not injurious** 148

**Shrivel and shrank:**
- **General remarks** 148
- **Various causes—how produced** 149
- **How to prevent** 150

**Dry rot in the roots:**
- **Indications** 151
- **Other kinds of rot, and how to prevent** 151

**Rot in the fruit:**
- **The cause, and how to remedy** 153

**Bald:**
- **The probable cause** 154
- **Remarks on watering overhead** 154

**CHAPTER XIV.**

**INSECTS AND HOW TO DESTROY THEM.**

**Remarks and different kinds** 156
**Red spider, scaly and mealy bugs** 157
**Green and black fly, thrips, fretters, rose bug** 158
**Beetles, moths** 159

**CHAPTER XV.**

**THE VINEYARD AND OUT-DOOR CULTURE.**

**General remarks** 161
**Bad effects of damp air and undrained land** 162
**Carbonate of lime, its good effects** 163
**Choice of situation** 164
**Preparing the land** 165
**Action of cold air** 166
**Formation of terraces** 167

**CHAPTER XVI.**

**Supplementary List of Exotic and of Native Varieties** 205
