and the other 1000 were used to estimate the parameters of the model. The model was then used to predict the number of cases in the remaining 1000 days.

The model was fitted to the data using the maximum likelihood method. The likelihood function was maximized using the Newton-Raphson method. The maximum likelihood estimates of the parameters were used to predict the number of cases in the remaining 1000 days.

The predicted number of cases was compared to the observed number of cases. The difference between the predicted and observed number of cases was used to evaluate the accuracy of the model.

The accuracy of the model was evaluated using the root mean square error (RMSE). The RMSE was calculated as the square root of the mean squared error (MSE).

The MSE was calculated as the average of the squared differences between the predicted and observed number of cases.

The RMSE was used to compare the accuracy of the model to other models. The model with the lowest RMSE was considered to be the most accurate.

The RMSE was also used to evaluate the accuracy of the model for different values of the parameters. The RMSE was calculated for each value of the parameters and the results were compared.

The results of the model were compared to the observed data. The model was able to predict the number of cases in the remaining 1000 days with a high degree of accuracy.

The model was able to predict the number of cases in the remaining 1000 days with a RMSE of 1.2. This indicates that the model was able to predict the number of cases with a high degree of accuracy.

The model was able to predict the number of cases in the remaining 1000 days with a RMSE of 1.2. This indicates that the model was able to predict the number of cases with a high degree of accuracy.

The model was able to predict the number of cases in the remaining 1000 days with a RMSE of 1.2. This indicates that the model was able to predict the number of cases with a high degree of accuracy.

The model was able to predict the number of cases in the remaining 1000 days with a RMSE of 1.2. This indicates that the model was able to predict the number of cases with a high degree of accuracy.

the 1990s, the number of people with a university degree has increased in all countries. The increase is most pronounced in the Netherlands, where the number of university graduates has increased from 1.5 million in 1980 to 2.5 million in 1995.

There are several reasons for the increase in university graduates. First, the number of people who go to university has increased. In the Netherlands, the number of university students has increased from 1.5 million in 1980 to 2.5 million in 1995. Second, the number of people who graduate from university has increased. In the Netherlands, the number of university graduates has increased from 1.5 million in 1980 to 2.5 million in 1995.

BIRDS

BIRD-DOM

BY *Wester*
LEANDER S. KEYSER

THE thrush that carols at the dawn of day
From the green steeples of the piny wood ;
The oriole in the elm ; the noisy jay,
Jargoning like a foreigner at his food ;
The bluebird balancing on some topmost spray,
Flooding with melody the neighborhood ;
Linnet and meadow-lark, and all the throng
That dwell in nests, and have the gift of song.

— LONGFELLOW.

THIS BOOK IS DEDICATED TO MY GENIAL FRIEND

AMOS R. WELLS

AS A TOKEN OF ESTEEM AND IN MEMORY OF MANY

A JAUNT TO THE HOMES OF THE BIRDS. THE

DELIGHTS OF OUR LITERARY FELLOW-

SHIP SHALL REMAIN A PLEASANT

SECRET BETWEEN US

THINK me not unkind and rude
That I walk in grove and glen;
I go to the god of the wood
To fetch his word to men.

Tax not my sloth that I
Fold my arms beside the brook;
Each cloud that floated in the sky
Writes a letter in my book.

Chide me not, laborious band,
For the idle flowers I brought;
Every aster in my hand
Goes home laden with a thought.

There was never mystery
But 'tis figured in the flowers;
Was never secret history
But birds tell it in the bowers.

— EMERSON.

NOTE.

NEARLY all the papers in this collection have appeared from time to time in various periodicals of the country, and I acknowledge with pleasure the uniform courtesy of editors and publishers in permitting me to reprint. It is but right to say that in revising these papers I have added many new observations. The following is a list of the periodicals in which one or more of the articles have been printed: *Outing, Belford's Magazine, The Congregationalist, The Advance, The Interior, Golden Rule, The Illustrated Christian Weekly, The Churchman, Youth's Companion, Young People's Weekly and Morning Star.*

THE AUTHOR.
