Essentials of Medical Electricity

Cumberbatch Elkin Percy
Title: Essentials of Medical Electricity

Author: Cumberbatch Elkin Percy

This is an exact replica of a book. The book reprint was manually improved by a team of professionals, as opposed to automatic/OCR processes used by some companies. However, the book may still have imperfections such as missing pages, poor pictures, errant marks, etc. that were a part of the original text. We appreciate your understanding of the imperfections which can not be improved, and hope you will enjoy reading this book.
A TEXT-BOOK OF
RADIOLOGY

BY
E. REGINALD MORTON
M.D., C.M. (TRIN. TOR.), F.R.C.S. (EDIN.)
Past President, Section of Electro-Therapeutics,
Royal Society of Medicine, Lecturer on Radiology, West London Post Graduate College,
in charge of X-Ray Department, West London Hospital, etc., etc.

Demy octavo. 237 pages. 26 full-page plates and 72 illustrations. Cloth

"Eminently practical and up-to-date."— Archives of the Roentgen Ray.
"A very valuable addition."—Lancet.
"Should be on the bookshelf of every naval medical officer."—Journal of the Royal Naval Medical Service.
"This is an eminently practical book."—Indian Medical Record.
"It is most concise, beautifully illustrated, and abounding with useful information."—Edinburgh Medical Journal.
"It is the book of all others to be recommended."—Universal Medical Record.
"We can heartily recommend it as a most useful guide and a valuable addition to X-ray literature."—West London Medical Journal.
ESSENTIALS
OF
MEDICAL ELECTRICITY

BY
E. REGINALD MORTON
M.D. (TRIN. TOR.), F.R.C.S. (EDIN.)
Medical Officer in Charge, X-Ray Department, West London Hospital, etc.

THIRD EDITION, REVISED AND REWRITTEN WITH ADDITION OF NEW MATTER

BY
ELKIN P. CUMBERBATCH, M.A., M.B., B.CH., OXON.
Member of the Royal College of Physicians of London, Medical Officer in Charge of the Electrical Department, St. Bartholomew's Hospital, and late Demonstrator of Physiology in the Medical School

WITH ELEVEN PLATES AND SEVENTY-TWO ILLUSTRATIONS

ST. LOUIS
C. V. MOSBY COMPANY
1916
PREFACE TO THE THIRD EDITION

Since the appearance of the last edition of the present work considerable advances have been made in the subject of medical electricity. New and important methods have been introduced, while the mode of action of electricity in the treatment of disease is now more clearly understood.

The author of the present edition has therefore found it necessary to rewrite and rearrange the work so as to include the new methods and, at the same time, present the subject in the light of the newer and clearer knowledge of the way in which electricity acts in the cure or relief of disease.

The different methods of electrical treatment have been considered in separate chapters. The title of the book compels the insertion of a chapter dealing with the elementary physical principles of electricity, for knowledge of the latter is essential for the successful practice of electro-therapy. The chapter dealing with this part of the subject has been placed at the end of the book, so that those who have not forgotten the elements of the physics of electricity can commence, as soon as possible, the chapters dealing with the application of electricity for medical purposes.

E. P. C.

1916.
CONTENTS

INTRODUCTION  ..............................................  I

CHAPTER I
THE MODE OF ACTION OF ELECTRICITY ON THE
BODY ..........................................................  3-15

CHAPTER II
THE CONSTANT CURRENT AND ITS MODIFICATIONS
..............................................................  16-34
Constant Current—Simple Interrupted Current—
Simple Alternating Current—Sinusoidal Current—
Slow Sinusoidal Currents—Faradic Current

CHAPTER III
SOURCES OF ELECTRICAL SUPPLY  .........................  35-63
Current from the Main—Direct Current—Alternating
Current—Rectifiers—Dangers attending Use of Main
Current—Private Installation—Accumulators—Primary
Batteries—Dry Cells

CHAPTER IV
THE BODY AS A CONDUCTOR OF ELECTRICITY  ..........  64-70
Resistance of the Body—Path of Current—Anode and
Kathode—Conduction of Currents at High Voltage

CHAPTER V
IONIC MEDICATION ...........................................  71-87
Definition—Introduction of Ions into Body—Advantages—
Limitations—Penetration—Apparatus—
Source of Current—Ions used—Practical Application
—Ionisation of Special Parts—Duration of Treatment

yii
CONTENTS

CHAPTER VI
Surgical Ionisation—The Use of the Electrical Current for Destruction of Tissue . . . . . 88–98

CHAPTER VII
Ionisation in Deep-Lying Tissues . . 99–103

CHAPTER VIII
The Use of the Electrical Current for Stimulation of the Tissues; Electric Baths . . . . 104–117
  Modification of Current for Stimulation of Tissues—Application to the Body—Electric Baths—General Faradisation or Galvanisation

CHAPTER IX
Electrical Treatment of Paralysis . 118–137
  Current—Electrodes—Strength and Duration of Treatment—Peripheral Nerve Paralysis—Facial Paralysis—Paralysis of Shoulder Muscles—Of Arm Muscles—Erb’s Paralysis—Peripheral Nerve Paralysis in Lower Limb—Infantile Paralysis

CHAPTER X
The Use of the Electrical Current for Testing the Reactions of Muscle and Nerve . . . . 138–160
  Normal Muscle and Nerve—How Electrical Testing is carried out—Testing Nerve Trunks—Types of Reaction—Meaning of Various Reactions—Course of the Reaction of Degeneration—Prognosis—Practical Difficulties—Defects—Testing with Condenser Discharges
