Telephotography, an elementary treatise on the construction and application of the telephotographic lens

Dallmeyer Thomas R
Title: Telephotography, an elementary treatise on the construction and application of the telephotographic lens

Author: Dallmeyer Thomas R

This is an exact replica of a book. The book reprint was manually improved by a team of professionals, as opposed to automatic/OCR processes used by some companies. However, the book may still have imperfections such as missing pages, poor pictures, errant marks, etc. that were a part of the original text. We appreciate your understanding of the imperfections which can not be improved, and hope you will enjoy reading this book.
Photograph of Mont Blanc, reduced from a negative 20 x 16, taken by Fred. Boissonnas, of Geneva. The distance from Geneva to Mont Blanc in a straight line is about 70 kilometres—say, 44 miles. The smaller photograph is a reduction in the same scale from a negative taken with an ordinary 15-in. lens. *(This photograph was awarded the medal of the Royal Photographic Society in 1892.*)
