CONTENTS.

INTRODUCTION, 1.—Origin and object of book, 1.

VARIETY OF HUMAN NATURE, 2.—Many varieties may each be good of its kind, 2; advantage of variety, 3; some peculiarities are, however, harmful, 3.

FEATURES, 4.—Large number of elements in the human expression, 4; of touches in a portrait, 5; difficulty of measuring the separate features, 5; or of selecting typical individuals, 5; the typical English face, 6; its change at different historical periods, 6; colour of hair of modern English, 7; caricatures, 8.

COMPOSITE PORTRAITURE, 8 (see Appendix for three Memoirs describing successive stages of the method).—Object and principle of the process, 8; description of the frontispiece—composites of medals, 11; of family portraits, 12; of the two sexes and of various ages, 13; of Royal Engineers, 14; the latter gives a clue to one direction in which the English race might be improved, 14; of criminals, 15; of the consumptive, 16; ethnological application of the process, 18.

BODILY QUALITIES, 19.—Anthropometric Committee, 19; statistical anomalies in stature as dependent on age, 20; town and rural population, 20; athletic feats now and formerly, 21; increase of stature of middle classes, 22; large number of weakly persons, 23; some appearances of weakness may be fallacious, 23; a barrel and a wheel, 24; definition of word “eugenics.”

ENERGY, 25.—It is the attribute of high races, 25; useful stimuli to activity, 25; fleas, etc., 26; the preservation of the weakly as exercises for pity, 26; that of foxes for sport, 27.

SENSIBILITY, 27.—Sensation and pain, 27; range and grades of sensation, 28; idiots, 28; men and women, 29; the blind, 30; reading by touch, 31; sailors, 32; paucity of words to express gradation, 33.
Sequence of Test Weights, 34 (see also Appendix, p. 370).—Geometric series of weights, 34; method of using them, 35; the same principle is applicable to other senses, 35; the tests only measure the state of faculties at time of trial, 36; cautions in constructing the test weights, 36; multiplicity of the usual perceptions, 37.

Whistles for Audibility of Shrih Notes, 38 (see also Appendix, p. 375).—Construction of them, 38; loss of power of hearing high notes as age advances, 38; trials upon animals, 39; sensitivity of cats to high notes, 39; of small dogs and ponies, 40.

Anthropometric Registers, 40.—Want of anthropometric laboratories, 40; of family records, 41; opportunities in schools, 42; Admiralty records of life of each seaman, 42; family registers, 43 (see also 336); autotypes, 44; medical value of ancestral life-histories, 44 (see also 336); of their importance to human eugenics, 44.

Unconsciousness of Peculiarities, 45.—Colour blindness usually unsuspected, 45; unconsciousness of high intellectual gifts, 46; of peculiarities of mental imagery, 46; heredity of colour blindness in Quakers, 47; Young and Dalton, 48.

Statistical Methods, 49.—Objects of statistical science, 49; constancy and continuity of statistical results, 49; groups and sub-groups, 50; augival or ogival curves, 51; wide application of the ogival method, 52; example, 53; first method of comparing two ogival groups, 53; centesimal grades, 53; example, 54; second method of comparing ogival groups, 54; statistical records easily made with a pricker, 55.

Character, 56.—Caprice and coyness of females, 56; its cause, 56; observations of character at schools, 57; varieties of likings and antipathies, 58; horror of snakes is by no means universal, 58; the horror of blood among cattle is variable, 60.

Criminals and the Insane, 61.—Peculiarities of criminal character, 61; some of them are normal and not morbid, 62; their inheritance as in the Jukes family, 63; epileptics and their nervous instability, 65; insanity, 66; religious rapture, 67; strange views of the insane on individuality, 67; their moody segregation, 67; the religious discipline of celibacy, fasting, and solitude, 68 (see also 74); large field of study among the insane and idiotic, 68.

Gregarious and Slavish Instincts, 68.—Most men shrink from responsibility, 69; study of gregarious animals, 69; especially of the
cattle of the Damaras, 70; fore-oxen to waggon teams, 72; conditions of safety of herds, 74; cow and young calf when approached by lions, 75; the most effective size of herd, 75; corresponding production of leaders, 77; similarly as regards barbarian tribes and their leaders, 78; power of tyranny vested in chiefs, 79; political and religious persecutions, 80; hence human servility, 80; but society may flourish without servility, 81; its corporate actions would then have statistical constancy, 81; nations who are guided by successive orators, etc., must be inconstant, 81; the romantic side of servility, 82; free political life, 82.

Intellectual Differences, 82.—Reference to Hereditary Genius, 83.

Mental Imagery, 83.—Purport of inquiry, 83; circular of questions, 84 (see Appendix for this, p. 378); the first answers were from scientific men, and were negative, 85; those from persons in general society were quite the reverse, 85; sources of my materials, 86; they are mutually corroborative, 87. Analysis of returns from 100 persons mostly of some eminence, 88; extracts from replies of those in whom the visualising faculty is highest, 89; those in whom it is mediocre, 90; lowest, 91; conformity between these and other sets of haphazard returns, 92; octile, median, etc., values, 93; visualisation of colour, 94; some liability to exaggeration, 94; blindfold chess-players, 95; remarkable instances of visualisation, 95, 96; the faculty is not necessarily connected with keen sight or tendency to dream, 97; comprehensive imagery, 97; the faculty in different sexes and ages, 99; is strongly hereditary, 100; seems notable among the French, 100; Bushmen, 101; Eskimo, 103; prehistoric men, 104; admits of being educated, 105; imagery usually fails in flexibility, 108; special and generic images, 109 (see also Appendix, p. 349); use of the faculty, 112.

Number-Forms, 114.—General account of the peculiarity; 115; mutually corroborative statements, 117; personal evidence given at the Anthropological Institute, 118; specimens of a few descriptions and illustrative woodcuts, 119; great variety in the Forms, 122; their early origin, 123; directions in which they run, 123; bold conceptions of children concerning height and depth, 124; historical dates, months, etc., 128; alphabet, 129; derivation of the Forms from the spoken names of numerals, 125; fixity of the Form compared to that of the handwriting, 126; of animals working in constant patterns, 127; of track of eye when searching for lost objects, 127; occasional origin from figures on clock, 127; from various other sources, 128;
the non-decimal nomenclature of numerals, 128; perplexity caused by it, 129. Description of figures in Plate I., 130; Plate II., 136; Plate III., 140; Plate IV., 141. Colours assigned to numerals, 146 (see 146); personal characters, 144; sex, 144; frequency with which the various numerals are used in the Talmud, 145.

Colour Associations, 145.—(Description of Plate IV. continued, 146) Associations with numerals, 146; with words and letters, 147; illustrations by Dr. J. Key, 151; the scheme of one seer unintelligible to other seers, 153; mental music, etc., 154.

Visionaries, 155.—Same persons often see visions, 155; the simpler kinds of visions, 155; unconsciousness of seers, at first, of the peculiarity, 156; subsequent dislike to speak about it, 156; images connected with words, 157; that of Mrs. Haweis, 157; automatic changes in dark field of eye, 158; my own experiences, 158; those of Rev. G. Henslow, 159; visions frequently unlike vivid visualisation, 163; phantasmagoria, 166; hallucinations, 167; simile of a seal in pond, 168; dreams and partial sensitiveness of brain, 169; hallucinations and illusions, their causes, 169; “faces in the fire,” etc., 170; sub-conscious picture-drawing, 172; visions based on patched recollections, 173; on blended recollections, 173; hereditary seership, 173; visions caused by fasting, etc., 174; by spiritual discipline, 174 (see also 68); star of Napoleon I., 175; hallucinations of great men, 177; seers commoner at some periods than at others, 176; reasons why 177.

Nurture and Nature, 177.—Their effects are difficult to separate, 177; the same character has many phases, 178; Renaissance, 178; changes owing merely to love of change, 179; feminine fashions, 180; periodical sequences of changed character in birds, 181; the interaction of nurture and nature, 181.

Associations, 182.—Derived from experience, 182; especially from childish recollections, 182 (see 195); abstract ideas, 183; cumulative ideas, like composite portraits, 183 (see also Appendix, “General Images,” p. 349); their resemblance even in details, 184.

Psychometric Experiments, 185.—Difficulty of watching the mind in operation, 185; how it may be overcome, 185; irksomeness of the process, 186; tentative experiments, 186; method used subsequently, 188; the number of recurrent associations, 191; memory, 192; age at which associations are formed, 195; similarity of the associations of persons of the same country and class of society, 196; different descri-
